

REMARKS

In a telephone conference of May 14, 2004, Examiner Roy requested that the amounts of boron and nitrogen in claim 2 be clarified. Examiner Roy said that we must recite the ppm of boron and nitrogen that satisfy the inequalities in claim 2, or explain how the weight percent of boron was calculated.

In claim 2, the amount of nitrogen is less than or equal to 0.0030 wt%. This amount of nitrogen was described in the specification as filed. According to the inequality in the specification and claims, when the amount of nitrogen is 0.0030 wt%, the maximum value of boron is 0.0058 wt% and when the amount of nitrogen is 0.00063 wt%, the amount of boron is 0.0010 wt%. In other words, the range of boron in the composition is from 0.0010 to about 0.0058 wt%.

In view of the above it is respectfully submitted that the claims are now in condition for allowance, and favorable action thereon is earnestly solicited.

Respectfully submitted,

BROWDY AND NEIMARK, P.L.L.C.  
Attorneys for Applicant
